Order from LC or SLA m\$1.80, ph\$1.80 60-16895

Trans. of Akad[emiya] Nauk SSSR. Dokl[ady] 1959,
v. 125 [no. 2] p. 341-344.

Cyclohexanol dehydration and the catalytic conversion
of cyclohexane were investigated in a reactor with a
boiling layer of powdery, microspherical aluminosilicate catalyst. Cyclohexanol dehydration occurs
until 200° on the aluminosilicates without noticeable
conversion of the produced cyclohexane. Further
temperature increase leads to isomerization, cyclo-
hexene polymerization and hydrogen redistribution.
The results show no essential difference in the con-
version products of cyclohexanol and of cyclohexane.
